-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 14-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Robins et al. (U.S. Patent No. 6,549,729 B1) in view of Murata et al. (U.S. Patent No. 5,249,058).

Robins et al. discloses an automatic focusing apparatus in Figs. 1-4; a first focus control device is disclosed as detecting the maximum contrast position during a scan operation using a number of sampling positions when the detected depression speed of the shutter button is greater than any of the times T_A - T_D shown in Fig. 4, which operation starts at the first stage of the depression of the shutter button and continues until the picture is taken; a second control device or step is shown as any one of steps 406, 410 and 414 in Fig. 4, which occur after the second stage of depression of the shutter button depending on the speed of depression, and the changeover control device or step is shown in Fig. 4 as any one of steps 404, 408, and 412.

Thus, Robins et al. discloses the claimed invention except for the extraction device extracting a high-frequency component of the image signal. Murata et al. discloses that maximum or peak value type focus devices typically extract a high-frequency component of the image signal. It would have been obvious to one of ordinary skill in the art, at the time of applicant's invention, to provide the Robins et al. focus apparatus with a high-frequency filtering of the image signal in order to obtain the desirable feature of a more accurate focus operation.

Allowable Subject Matter

3. Claims 1-13 are allowed.

REASONS FOR ALLOWANCE

4. The following is an examiner's statement of reasons for allowance: The primary reason for allowance of claims 1-13 is the claim limitation, found in claims 1 and 12, that the number of times of the scan operation is changed in accordance with a state of the photographing operation instruction device.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
